

Superior Energy Services: Completion Services

Superior Completion Services has the technology, resources and experience to deliver effective sand control and stimulation services in any downhole condition. Challenging completions on the shelf, in deepwater and in ultra-deepwater arenas demand state-of-the-art technology that reduces risk, increases completion efficiencies and maximizes production. Superior Energy's field proven best-in-class sand control tools and stimulation services minimize risk, reduce completion costs and deliver optimized completions.

Completion Systems

Sand Control - Conventional gravel pack and frac pack systems

- Differential ratings to 15,000 psi and 350°F, externally retrievable
- Industry leading zone isolation and intervention-less production initiation systems
- ComPlete™ single trip systems for reducing completion cycle time and optimizing reservoir productivity
 - MST™ (multizone single trip) - gravel pack or frac pack multiple zones in a single trip
 - RST™ (releasable single trip) - perforate and gravel pack/frac pack system
 - HST™ (horizontal single trip) - washdown, gravel pack/frac pack and selective stimulation system

Well Screens

- ProWeld™ standard and HD wire wrapped screens including wrap on pipe
- DynaFlo™ DB diffusion bonded premium screens
- SlimFlo™ Prepacked well screens
- CoilFlo™ Well screens

Surface Controlled Sub Surface Safety Valves

- FlowSafe™ tubing retrievable and wireline retrievable subsurface safety valves
2 3/8" to 7", 5,000 – 10,000 psi rated

Pumping and Stimulation

Vessel: Superior Inspiration

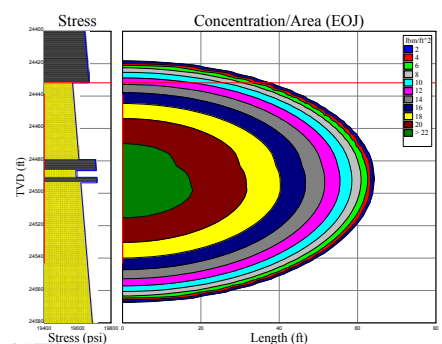

- Full service sand control and stimulation, deepwater capable, dynamic positioning (DP-2) vessel

Skid Based Equipment

- Fleet of full-service sand control and stimulation skid mounted equipment for land, inland water, barge or platform work
- Flameless Thermal Units™ provide exceptional performance in remediating organic deposits, treating surface equipment, heating wellbore fluids during flowbacks or any job requiring heated fluids

Stimulation and Sand Control Fluids

- Laboratory supported – fit-for-purpose frac pack and gravel pack fluid systems
- Proprietary stimulation acid systems
- High density frac pack fluid systems
