

Wild Well Control

Wild Well Control is the world's leading provider of firefighting, blowout control, well and marine engineering and training services.

For well control emergencies, Wild Well Control provides immediate response services that include firefighting, well control, pressure control and well control engineering services – including well kill modeling and relief well planning and execution. Through its Engineering Group, Wild Well Control also provides non-emergency or preventative services that include risk assessment and analysis; rig audit of well control equipment and systems; emergency response and contingency planning; and well modeling services.

Wild Well Control's Marine Engineering Group provides both well and marine engineering services for unique marine situations involving wells. This work includes platform recovery, critical well plug and abandonment and subsea well work.

Well Control Training, the training group at Wild Well Control, provides well control certification training to drilling contractor and operator personnel. Accredited by the International Association of Drilling Contractors (IADC) WellCAP® program, Well Control Training utilizes state-of-the-art simulators and real case histories in its curriculums.

Wild Well Control has staged full sets of specialized firefighting and well control equipment in five strategic locations around the world in order to deliver a more efficient and effective response to its clients' well control emergencies.
